KARMA™ URETHANE

AFP Affordable performance

URETHANE COVERSTOCK

The Karma Navy Solid uses a retro **Urethane** coverstock. Designed for extra length and a smooth predictable ball motion the **Karma Urethane** is designed for lighter amounts of oil and a more "down the boards" line to the pocket.

CORE

The **Karma Urethane** incorporates a familiar light bulb shape Medium RG Performance core that provides easy length through the heads, mid-lane stability while maintaining axis rotation for a strong continuous backend motion.

BALL MOTION

With its 1500 grit Siaair Micro Pad finish, the **Karma Urethane** will still provide good length through the heads with a very smooth predictable breakpoint. The **Karma Urethane** is great ball for rev dominant and slower ball speed players on light oil conditions.

REACTION SETUP

The **Karma Urethane** be drilled using the standard drilling techniques developed for symmetric bowling balls.

LIGHTWEIGHT ENGINEERING

At Brunswick, the unique core shape of each individual ball is used for weights from 12 to 16 pounds. This approach to lightweight ball engineering provides bowlers with consistent ball reaction characteristics across this weight range.
