COVERSTOCK

The **Addaptive ƒ(P²) Pearl** coverstock is Brunswick's latest advancement in performance enhancing additive chemistry. **ƒ(P²)** describes our latest formula which multiplies our (P) rojection additive with an aggressive reactive coverstock base creating a Super Clean cover that skids easily down the lane creating maximum versatility. This new formulation produces the cleanest front end, while maintaining traction on the backend to create the most versatile coverstock to date for Brunswick.

CORE

The new **Meanstreak High RG symmetrical** core features a long and lean design to provide maximum energy retention. Adding a mass around the equator stabilizes the dynamics to enhance the versatility of the core.

BALL MOTION

With its High Gloss finish, the **Meanstreak** is super clean through the front, retaining axis rotation for the backend with a strong continuous breakpoint. This combination of coverstock and core creates an extremely versatile motion and a great "Go To" ball on lower volume & broken down lane conditions.

REACTION SETUP

The **Meanstreak** can be drilled using the standard drilling techniques developed for symmetric bowling balls.

LIGHTWEIGHT ENGINEERING

At Brunswick, the unique core shape of each individual ball is used for weights from 14 to 16 pounds. This approach to lightweight ball engineering provides bowlers with consistent ball reaction characteristics across this weight range. At 12 and 13 pounds, Brunswick uses a generic core shape with a RG-differential that is close enough to the 14 to 16 pound shape so the same drilling instructions can be used.

	16 LB	15 LB	14 LB	13 LB	12 LB
RG-MAX	2.593	2.605	2.621	2.614	2.637
