MELEE™ JAB

ALL-PURPOSE

COVERSTOCK

The new **Savvy Hook Pearl Reactive** is formulated to provide maximum versatility with more traction in oil for a pearl coverstock on a variety of lane conditions for all types of physical styles. This new formulation produces easy length through the heads with mid-lane traction and a powerful backend reaction.

CORE

The new **Melee Low RG Symmetrical** core features a curvilinear design to provide maximum energy retention. The new core shape revs quicker producing maximum performance and drilling versatility.

BALL MOTION

With its Royal Compound Finish, the **Melee Jab** skids easily through the front, revving strong in the mid-lane saving axis rotation for the backend to provide greater entry angle to the pocket for outstanding pin action. With its chemically designed surface texture, the **Melee Jab** will provide the most traction in oil for a pearl coverstock on a variety of lane patterns on medium to oily lane patterns.

REACTION SETUP

The **Melee Jab** can be drilled using the standard drilling techniques developed for symmetric core bowling balls.

LIGHTWEIGHT ENGINEERING

At Brunswick, the unique core shape of each individual ball is used for weights from 14 to 16 pounds. This approach to lightweight ball engineering provides bowlers with consistent ball reaction characteristics across this weight range. At 12 and 13 pounds, Brunswick uses a generic core shape with a RG-differential that is close enough to the 14 to 16 pound shape so the same drilling instructions can be used.
