RINGER™ BURGUNDY PEARL

AFP Affordable performance

COVERSTOCK

The **CPT / C**hemical **P**rojection **T**echnology reactive coverstock describes our newest formulation for a low friction coverstock. The benefits of using our Chemical Projection Technology allows us to produce a less aggressive reactive coverstock that easily projects down the lane without making the coverstock highly sensitive to the dry and oily parts of the lane.

CORE

The new **Ringer Medium RG symmetrical** core features top and bottom offsetting flip blocks over a centered mass. This core design promotes skid through the front, stability through the mid-lane and flip on the backend.

BALL MOTION

With its High Gloss box finish, the **Ringer Burgundy Pearl** will provide excellent length with a medium to quick response to friction at the breakpoint. The **Ringer Burgundy Pearl** is great ball for rev dominant and slower ball speed players on light oil conditions.

REACTION SETUP

The **Ringer Burgundy Pearl** be drilled using the standard drilling techniques developed for symmetric bowling balls.

LIGHTWEIGHT ENGINEERING

At Brunswick, the unique core shape of each individual ball is used for weights from 12 to 16 pounds. This approach to lightweight ball engineering provides bowlers with consistent ball reaction characteristics across this weight range.
