SOUL™ BLACK SMOKE SOLID

AFFORDABLE

COVERSTOCK

The **CPTv2 – Control** reactive coverstock describes the updated version 2 of our low friction coverstock. The Chemical Projection Technology Control formulation allows for a lower friction reactive coverstock that easily projects down the lane and provides a more controllable hook motion on medium oil lane conditions.

CORE

The **Soul Medium RG symmetrical** core features a multi-sided core system. This core design creates an optimum medium RG match up for low friction coverstock.

BALL MOTION

With its Royal Compound finish, the **Soul** skids easily through the front, gripping the mid-lane for a consistent breakpoint. The **Soul** provides a controllable and continuous hook motion for rev dominant and slower ball speed players on medium oil conditions.

REACTION SETUP

The **Soul** can be drilled using the standard drilling techniques developed for symmetric core bowling balls.

LIGHTWEIGHT ENGINEERING

At Brunswick, the unique core shape of each individual ball is used for weights from 12 to 16 pounds. This approach to lightweight ball engineering provides bowlers with consistent ball reaction characteristics across this weight range.
